Digital Mohalla — Borrowing lifecycle state machine (BorrowingTransaction, design step A3, v2.2)

States and event types: Use Cases v1.3 §2, FR-B-08; HELD_FOR_REVIEW exits ADR-0003; DISPUTED exits ADR-0004; overlap constraint ADR-0002. Transition IDs = rows of transition_table.csv.

event [guard] / action; transition IDs T01–T26 are rows of transition_table.csv.
Bold border = terminal state (no further transitions; record kept).
◇ choice pseudostate. **H** = shallow history of IN_PROGRESS: dispute_withdrawn restores the previous_state stored in dispute_opened (ADR-0004).
Border arrows apply to every substate of the composite (T23: except RETURNED, team decision D4).
it.2 = drawn for completeness, built in iteration 2 (scheduler / extensions); faded.
Lifecycle state ≠ assurance state: the assurance state is an attribute of the Assessment (e.g. HELD_FOR_REVIEW with REVIEW_RECOMMENDED, ES-04).
