Digital Mohalla — Domain model (conceptual), iteration-1 core (design step A2, v1.0 baseline; LocalityResult, ConditionReport and Booking kept, decision D18)

Conceptual classes and associations only (no operations, no implementation types). Colour = owning module. References to User inside Outcome, TrustEdge, Review and ModeratorDecision are shown as role attributes.

Separate attributes, deliberately: BorrowingTransaction.lifecycleState (where the loan is) and Assessment.assuranceState (what the evidence says) — e.g. HELD_FOR_REVIEW with REVIEW_RECOMMENDED (ES-04). **Deliberately left out of iteration 1:** chat thread and messages (G1), notifications (G3), calendar blocks (B2), listing photos, counter-offer, appeal (modelled as later ModeratorDecisions). ◆ composition: events live and die with their transaction. Colours: S1 S2 S3.
