Digital Mohalla — Escalation case state machine (EscalationCase, design step A3, v2.0)

Case types: dispute (booking DISPUTED) and non-dispute hold (request HELD_FOR_REVIEW). Sources: UC-D6, UC-I4, FR-T-10, FR-T-11, ADR-0003, ADR-0004.

Case actions are not lifecycle event types: each is written to the hash-chained audit_log (FR-M-05) and the case row keeps the current status. The decision itself becomes a lifecycle event (C06 → dispute_resolved T25, hold_cleared T09–T11 or request_declined T12).
it.2: appeal and reversal are designed here but built in iteration 2 (Iteration 1 plan, Module 9).
