SD3 – Dispute: raise (B12), escalate with evidence trail (D6), moderator resolves (I4), or withdrawal

Version 1.2 | Date 2026-10-11, as-built labels 2026-10-14 | Author: Student 3 | Reviewed by: Fatima Khursheed, Areeba Javed (design gate A14) | Status: draft (integration 2026-10-11: Use Cases v1.3, ADR-0001 to 0005; transitions T23, T25, T26 of the A3 table)
Realises: UC-B12, UC-D6, UC-I4; FR-B-14 to FR-B-17, FR-T-10, FR-T-11, FR-M-05; ADR-0004
Package: Borrowing lifecycle, Trust, reputation & safety, Administration & moderation (EscalationCase) (mapped to code packages in A8)
Rationale: Shows the dispute from the raising party's first action to the moderator's decision, including the no-response case and withdrawal. The booking moves to DISPUTED, then to COMPLETED through dispute_resolved (moderator) or back to its previous state through dispute_withdrawn. The resolved outcome goes to the Assurance Engine as evidence, which is the learning loop.
Notation (UML): stick figure = actor outside the system; box = object lifeline; white bar = activation; solid line + filled head = synchronous call; dashed line + open head = reply; solid line + open head = asynchronous message; dashed line + open head labelled «create» = create message; U-shaped arrow = self message; rounded box on a lifeline = state invariant; [text] = guard; alt / opt / ref = interaction frames. Replies that carry no data are omitted. Grey = planned (iteration 2), not built in iteration 1.
